Multi-Standard Desktop Video Module

FQ1216ME MK3

FEATURES

- Multi-Standard TV Systems Broadcast reception
- True 5 V device (low power dissipation)
- Full frequency range from channel E2 (48.25 MHz) to channel E69 (855.25 MHz)
- PLL controlled tuning
- Programmable PLL step size (31.25 / 50 kHz or 62.5 kHz)
- True-synchronous vision IF demodulator (PLL)
- Ultra linear FM PLL demodulator
- Demodulated video output, AF sound output, second IF sound output.
- I²C-bus control of tuning, address selection, AFC status information
- User-settable 2nd IF address for PIP application
- Complies with European regulations on radiation, signal handling and immunity ("CENELEC 55020, 55013")
- Small horizontally mounted metal 70 mm housing

MARKING

The following items of information are printed on a sticker that is on the top cover of the tuner:

- Type number
- Code number
- Origin letter of factory
- Change code
- Year and week code

Multi-Standard Desktop Video Module

FQ1216ME MK3

DESCRIPTION

The FQ1216ME family belongs to the new FM1200 MK3 family of small size frontends, which are designed to meet a wide range of RF applications in the PC /TV Multi-Media environment. The FQ1216ME combines the functions of an all-band TV tuner, and a multi-standard TV IF demodulation unit for both positive and negative modulated TV systems. The FQ1216ME is intended for CCIR L/L' (France), B/G, I and D/K systems. The FQ1216MP covers only CCIR B/G, D/K and I.

The frontends have a built-in digital (I^2C) PLL tuning system. A DC-DC converter circuit is built-in in the FQ1216ME to synthesize the tuning voltage required, thus making the frontend a true 5V device.

The FQ1216ME/IV-3 has a fixed address of # 84 for the IF processor. For all others, a second address can be set by using a 2K2 resistor at 10 of the module.

All modules use the narrowband AGC detection system.

APPLICATION INFORMATION**DEMONSTRATION KIT**

A demonstration kit is available for the FQ1216ME (software, Application Note and evaluation board). Please contact your local Sales Engineer for details about the price and availability

I²C PROGRAMMING

For information regarding general aspects of I²C bus control see 'The I²C-bus and how to use it', published by Philips Semiconductors under the code : 9398 393 40011.

The FQ1216ME contains two I²C transceivers, one in the tuner part and one in the IF part. It is imperative to ensure that both I²C devices are programmed correctly according to their addresses

If in doubt, please refer to the demonstration software.

Multi-Standard Desktop Video Module**FQ1216ME MK3****Tuner Part Programming (Write Mode)**BIT ALLOCATION

(WRITE MODE , R/W = 0).

Write Data	MSB	bit6	bit5	bit4	bit3	bit2	bit1	LSB	ACK
Address Byte ADB	1	1	0	0	0	MA1	MA0	R/W=0	A
Divider Byte 1 DB1	0	N14	N13	N12	N11	N10	N9	N8	A
Divider Byte 2 DB2	N7	N6	N5	N4	N3	N2	N1	N0	A
Control Byte CB	1	CP	T2	T1	T0	RSA	RSB	OS	A
Bandswitch Byte BB	P7	P6	P5	P4	P3	P2	P1	P0	A
Auxiliary Byte AB (note *)	ATC	AL2	AL1	AL0	0	0	0	0	A

Note *: By default it is set to AL2=0, AL1=1, AL0=0. This sets the tuner TOP to 112 dBuV upon power-on reset.

ADDRESS SELECTION (BYTE ADB)

Voltage at terminal 6	Address	MA1	MA0
0 0.1 V _{CC}	C0	0	0
0.2.....0.3 V _{CC}	C2	0	1
0.4 0.6 V _{CC}	C4	1	0
0.9 V _{CC} 5 V	C6	1	1

Note: If the AS pin is left floating, the internal biasing will automatically set the address to C2.

PROGRAMMABLE DIVIDER SETTING (BYTES DB1 AND DB2)

Divider ratio:
$$N = F_{OSC}/F_{ss}$$

where $F_{OSC} = (F_{RF} + F_{IF})$ and F_{ss} is the step-size set by RSA and RSB as described below.

$$N = 8192*N13 + 4096*N12 + 2048*N11 + 1024*N10 + 512*N9 + 256*N8 + 128*N7 + 64*N6 + 32*N5 + 16*N4 + 8*N3 + 4*N2 + 2*N1 + N0$$

Note: $F_{IF} = 38.9 \text{ MHz}$, except for L' mode. In this case $F_{IF} = 33.95 \text{ MHz}$

CONTROL BYTE CBCharge Pump Setting:

CP can be set to either 0 (low current) or 1 (high current).

CP = 1, charge pump current = 280uA results in fastest tuning (default mode)

CP = 0, charge pump current = 60uA results in moderate speed tuning with slightly better residual oscillator

Test Mode Setting:

T2 = 0, T1 = 0, T0 = 1 for normal operation (default)

T2 = 0, T1 = 1, T0 = 1 indicates that Byte AB will follow Byte CB instead of Byte BB for the current IIC Byte

Multi-Standard Desktop Video Module

FQ1216ME MK3

PLL Disabling:

OS=0 for normal operation,

OS=1 switches off the PLL tuning amplifier (PLL tuning is disabled)

Ratio Select Bits

RSA = 0, RSB = 0 gives 50 kHz step-size

RSA = 0, RSB = 1 gives 31.25 kHz step-size (for slow picture-search)

RSA = 1, RSB = 0 gives 166.7 kHz step-size

RSA = 1, RSB = 1 gives 62.5 kHz step-size (for normal picture-search)

BANDSWITCHING BYTE BB

PORTS	P0	P1	P2	P3	P4	P5	P6	P7
LOW BAND	1	0	0	0	0	X	X	X
MID BAND	0	1	0	0	0	X	X	X
HIGH BAND	0	0	1	0	0	X	X	X

AUXILLIARY BYTE AB

The AGC Take Over Point can be set by programming the following bits AL2, AL1, AL0

IF output level, symmetrical mode	Remark	AL2	AL1	AL0
115 dB μ V		0	0	0
115 dB μ V		0	0	1
112 dB μ V	default mode at POR	0	1	0
109 dB μ V	Recommended for negative modulation	0	1	1
106 dB μ V	Recommended for positive modulation	1	0	0
103 dB μ V		1	0	1
I _{AGC} = 0	External AGC . See remarks (1) & (3).	1	1	0
3.5 V	Disabled . See remarks (2).	1	1	1

Remarks:

- 1). The AGC detector is disabled. Both the sinking and sourcing current from the IC is disabled. The AGC output goes into a high impedance state and an external AGC source can be connected in parallel and will not be influenced.
- 2). The AGC detector is disabled and I_{AGC} = 9 μ A.

Note:

The AGC detection system has been changed to the narrowband mode for both negative and positive modulation systems. All new versions carry the code SV21 (old versions carry the code SV20). The settings have been hard-coded inside the modules and customers are not required to change their software to adapt to the new AGC system.

Tuner Part Programming (Read Mode)

BIT ALLOCATION (READ MODE R/W = 1)

	MSB	bit6	bit5	bit4	bit3	bit2	bit1	LSB	ACK
Address Byte ADB	1	1	0	0	0	MA1	MA0	R/W=1	A
Status Byte SB	POR	FL	1	1	AGC	A2	A1	A0	A

The following data can be read from the device through the status byte:

POR (power on reset): POR is internally set to 1 in case V_{cc} drops below 3V. The POR bit is reset when an end of data is detected by the PLL-IC.

FL: in lock flag (FL = 1 when the phase lock loop is in lock).

The loop must be phase-locked during at least 8 periods of the internal 7.8125 kHz reference-frequency (i.e. 1 msec) before the FL flag is internally set to 1.

AGC : internal AGC flag. AGC=1 when internal AGC is active (level below 3V)

A2, A1, A0 : Not used.

$F_{VIF} \geq F_0 + 187.5 \text{ kHz}$	1	0	0	0

Note

1. F_0 = nominal F_{VIF}

AFCWIN = 1 F_{VIF} inside AFC Window

AFCWIN = 0 F_{VIF} outside AFC Window

PROGRAMMING EXAMPLES

Example 1: To tune to Ch E21 (471.25 MHz) in high band

$F_{osc} = 471.25 + 38.9 = 510.15 \text{ MHz}$

$N = (510.15 \text{ MHz}) / (62.5 \text{ kHz}) = 1F \text{ E2 (Hexadecimal)}$

So DB1 = 1F H

and DB2 = E2 H

CB = 86H if CP is set to low or CB = C6H if CP is set to high

BB = 44H (because of high band selected)

FQ1216ME MK3

LOADING OF I²C BUS

The FQ1216ME contains series impedances in the SCL and SDA lines : a total of R= 220 ohms leading to the tuner part and R= 300 ohms leading to the IF demodulation part. See the diagram below. Both lines also have capacitive loads of C= 22 pF max. Care must be taken to ensure that the total load on the bus does not exceed that as mentioned in the brochure "The I²C-bus and how to use it".

AUDIO EMPHASIS

The audio de-emphasis (50 us) is set by the bits C5 and C6

- C5=0 de-emphasis OFF
- C5=1 de-emphasis ON
- C6=1 50us
- C6=0 75 us

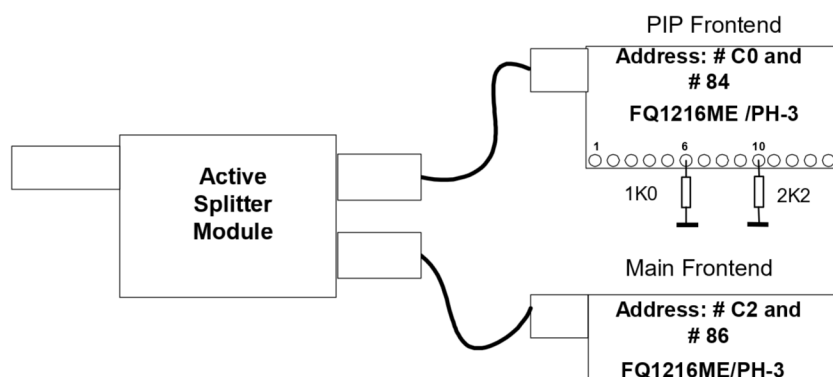

De-emphasis should be switched off in L/L' mode since it is not required for AM sound.

CVBS LOAD / TUNING VOLTAGE SUPPLY

A video buffer is built into the frontend to enable the unit to drive a 75 Ω load directly (e.g. into the SAA711x directly). A DC-DC converter for providing the required tuning voltage supply is already built into the FQ1216ME.

PIP APPLICATION

The FQ1216ME has a second user-defined address for the IF circuit. By setting a 2K2 resistor at pin 10, the AFRIC address is set to # 84. In the same manner, with a 1K resistor to ground at pin 6, the tuner is set to an address of # C0. The other FQ1216ME Mk3 remains unchanged with an address of # C2 and # 86 respectively. An example is shown below.

AERIAL CONNECTIONS

Standard connector in accordance with type order information found on Page 2 and drawings found on Page 25.

SOLDERABILITY

The solderability of pins and mounting tags when tested initially and after 16 hour steam ageing in accordance with "IEC 60068-2-20", test Ta, method 1 (solder bath 235°C for 2s), results in a wetted area of 95%. No de-wetting will occur when soldered at 260°C for 5s.

RESISTANCE TO SOLDERING HEAT

The product will not be damaged when tested in accordance with "IEC 60068-2-20", test Tb, method 1A (solder bath 260°C for 10±1 s).

MASS

Approximately 45g.

PACKAGING INFO

The products are packed in the carton box and transferred to customers by Pallet Transport.

Mounting Type		Dimension B x w x h (cm)	No. of sets	Gross Wt (Kg)
Horizontal-mount type	Carton	46 x 34 x 5.4	40	2.34
	Pallet	120 x 105 x 105	4280	272.38
Vertical-mount type	Carton	46 x 34 x 10.2	120	6.38
	Pallet	120 x 105 x 105	6960	392.04

Carton Boxes are made of Corrugated Fibreboard which are free of environmentally banned substances.

ROBUSTNESS OF PINS

The pins will not be damaged when tested in accordance with "IEC 60068-2-21":

- Test Ua1, tensile of 10N in axial direction
- Test Ua2, thrust of 4N in axial direction

PUNCHING PATTERN OF CHASSIS PCB

For optimum mounting of the tuner to a PCB, the punching pattern is recommended (see 3139 149 0120).

The tuner must be mounted without clearance between the tuner supporting surface and the printed circuit board (PCB). When mounted in this way, the tuner must be soldered to the PCB. This can be achieved by pressing the unit vertically onto the PCB during soldering.
