SD Card Interface

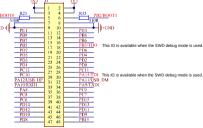

TFT LCD Interface

BOOT 0	BOOT 1	Boot source
0	х	Flash(MMBasic)
1	0	System bootloader
1	1	RAM

The STM32 operating mode has been grounded by default: grounded via P7 and R8. Normal operation, the jumper cap does not need to be plugged in, if other working modes are required. In order to change the jumper cap insertion mode, the board has a jumper cap by default. The jumper cap is inserted into the flash mode by default for the convenience of the board.

Reserved IO Interface
